

PROFESSIONAL SUMMARY

Ambitious and driven Entry-Level Java Developer with strong academic background in computer science and hands-on experience in programming, database management, and software development. Enthusiastic about contributing to innovative projects and eager to build a career in the software development industry.

EDUCATION

Bachelor of Science in Software Engineering

University of Chicago / United States,  
Graduated: May 2025

- GPA: 3.9/4.0
- Relevant Coursework: Object-Oriented Programming, Algorithms and Data Structures, Software Testing, Database Systems, Web Development.

Certifications

- Java SE 11 Developer Certification, Oracle, June 2023
- Full Stack Web Development (Java, Spring Boot, Angular), Udemy, December 2022

SKILLS

- Languages: Java, SQL, HTML, CSS, JavaScript Expert
- Frameworks: Spring Boot, Hibernate, Thymeleaf, Angular Expert
- Tools & Technologies: Git, Maven, MySQL, Jenkins, JUnit Expert
- Development Practices: Agile Scrum, TDD, CI/CD Expert
- Soft Skills: Team collaboration, critical thinking, adaptability, communication Expert

EXPERIENCE

2025 - Now

Entry-Level Java Developer

Chicago Tech Solutions

- Work alongside senior developers to build and maintain backend systems using Java and Spring Boot.
- Write unit tests with JUnit to ensure the robustness and functionality of the code.
- Collaborate with QA engineers to identify and resolve issues, ensuring high-quality deliverables.
- Take part in daily standups and sprint planning meetings in an Agile development environment.

2024 - 2024

Software Engineering Intern

Tech Innovators Inc. / Chicago, IL

- Worked with senior developers to enhance the performance of existing applications.
- Contributed to the debugging and troubleshooting of software issues.

PROJECTS

Task Management System

- Developed a task management web application using Java, Spring Boot, and MySQL.
- Created features for user login, task creation, completion, and role-based permissions.
- Implemented security measures such as password hashing and authentication.

Movie Review Application

- Built a movie review application using Java and integrated the OMDB API to fetch data.
- Designed a responsive UI using Angular for an enhanced user experience.
- Utilized Java Spring Boot for building the backend and serving the frontend requests.
