Professional summary

.NET Solutions Architect with experience in large-scale enterprise systems. Expert in system design, architecture patterns, and cloud-native solutions using .NET and Azure. Strong focus on performance, scalability, and cross-team collaboration.

Experience

Allianz Technology

February 2019 - Now

Munich, Germany

.NET Solutions Architect

- Architected a new insurance claims platform using event-driven microservices, improving claims processing time by 30%.
- Lead design workshops and code reviews across distributed teams, ensuring the adoption of best practices.
- Define DevOps practices and automate deployments using GitHub Actions and Azure, reducing deployment time by 50%.
- Standardize application logging and monitoring using Serilog and Azure Monitor, improving system observability.

Siemens Healthineers

May 2014 - January 2019

Erlangen, Germany

Senior .NET Developer

- Designed reusable backend components for patient data management systems, reducing development time by 40%.
- Ensured compliance with medical software standards (ISO/IEC 62304), maintaining high system reliability.
- Co-authored internal whitepapers on scalable cloud architecture, providing direction for future development.

Additional Information

- Organizer of the Munich .NET Developer community events
- Volunteer for coding education programs for women in tech
